Justification

The mentioned products do not contain any additives, which could be qualified as impure [najis] according to Islamic law, are not produced from any impurity [najasat] and do not contact any impurity during the production process. This has been evaluated by Muslim experts based on the detailed documentation, on the existing list of additives and yearly plant visits since 2015, last on 25th of August 2016 in Großrosseln (Germany).

The mentioned products are based on herbal material only. The raw material is delivered to the production plant in Großrosseln (Germany) from regional and Europe wide supply by cooperating farmers or in smaller units. The cargo discharge takes place inside the own manufactory into own silos and contracting partner.

None of the facilities are used to discharge any other raw material, so that any contact to impurity [najasat] during discharge can be excluded. Furthermore all facilities are cleaned periodically.

All steps and production stages take place in closed apparatuses and facilities which are exclusively used for the mentioned production, so that any contact to impure agents can be excluded. In no production stage the material gets in any contact with human skin. The only possible stage for such a contact is the unloading of the raw material. In this stage the workers are obligated to wear gloves.

All mentioned products are treated inside the manufactory in specific production lines. All processes for the treatment of cereal flakes, flours, groats and oat bran are based on mechanical or thermal unit operations with following raw materials:

- Barley
- Oats
- Rye
- Wheat
- Spelt

All mentioned raw material is from pure vegetable sources and therefore ritual pure [tahir] and permitted for Muslims. Any further ingredients were not added!

Cooperations-Partner of Islamic Centre Hamburg (Imam Ali Mosque), Islamisches Bildungs- und Kulturzentrum Österreich (Austria), Enzyklopädie des Islam (eslam.de), RAL-Gütesiegel Halal (Germany), Islamic Republic of Iran, Halal Development Council, Halal Research Council, Mufties Council of Russia, Halal Transaction of Omaha

The main processes are commonly drying, screening, aspiration, separation of stone, pulverization and mixing of several fractions. The raw material itself was already pure [tahir] and there is no contact with impurity [najasat] during the production processes or any possibility for cross-contamination with impurity [najasat].

At the end of production the product is full automatically (in some cases with manual support) filled into synthetic material packages as flexible intermediate bulk container or bigbags with polypropylene or paper. In some cases the product is delivered directly into the container and delivered to the contracting partner.

The productions facilities are cleaned usually dry or in some cases with pure water without any additive, and no impurity [najasat] gets in any direct or indirect contact neither with the products, nor with the production facilities.

In the complete manufacturing site exists a strictly prohibition of alcohol for the employee, which is additionally announce over placards. Any irregularity in this field is punished drastically, which is guaranteed by the plant management.

Furthermore the company applies a quality management system. Every incoming raw material is registered and can be identified retroactive. The production has implemented and maintains a Quality and Environmental Management System which fulfils the requirements of the standards: International Food Standard (IFS, Version 6), and organic production according to EC Regulation 834/2007.

Conclusion

The transparency of all production stages as well as the information of all used material inside the facilities do not let any doubt, that the

Cereal Flakes, Flours, Groats and Oat Bran (all products also in organic (bio) quality)

produced by Megro GmbH & Co. KG (in Großrosseln) have to be classified as "pure" [tahir] and permitted and are therefore "halal" (حلال) for Muslims.
